Dear Customer,

The instructions for usage of the products you have purchased:

3 TELA-MS7

To use the **TELA-MS7**, you will need a pail and some lukewarm water. Pour one bag of the **TELA-MS7** into the pail and then add some lukewarm water until you have a slurry mixture. There are two ways to then use this mixture. For minor problems such as odor or slow flush, pour the product into your various bathroom toilets and drains last thing at night. Please allow this to sit in the pipes overnight with little usage of the system to ensure maximum cleaning in your house pipes and drains.

OR Please note: If you are having a more serious problem pour the entire contents into the septic tank directly if this is possible. Prior to adding the product it is suggested that you stir up the surface scum with a shovel or two by four. If you take this measure please be extremely careful of the gases that may rise out of the tank and take proper precautions.

This process can be repeated every two weeks or as necessary.

It is highly recommended that one month after the initial applications, you will start regular usage of our septic and drainfield cleaner **RC-4**. You will put ½ a bag of **RC-4** down one of your toilets each month. Please rotate in which toilet you are applying the product to ensure that your pipes from each are cleaned on a regular basis.

By using our products in this way, you ensure the maximum life of your drainfield and septic system. Pumping is also required every 3-5 years rather than every 2-3. When the system is pumped out please add 1 full bag of **RC-4** immediately to ensure proper bacterial levels are maintained in the tank for waste digestion.

Thank you for choosing **TELAMODE'S** fine products.

“Let our family help yours be part of a green tomorrow”
